

Scope of Service for Construction Services at the Gladstone Hot Mix Asphalt (HMA) Testing Facility:

1. Under General Responsibilities, Paragraph 4.D, it appears that in addition to a certified HMA, Aggregate, Concrete, and Density tester, you also want an experienced field inspector equipped with FieldManager/FileBook software/computer and able to run FieldManager/FileBook. Is the intent of this FRP to hire a consultant to provide full-time personnel for all of these services?

The Superior Region is looking for person(s) certified in HMA, Aggregate, Concrete and Density. The additional requirement of FieldManager/FileBook is only to the extent of having knowledge of the program capabilities and previous introduction to the use of the program. MDOT will provide any equipment necessary to run FieldManager/FileBook if an assignment to perform this work is made. The intent of the RFP is to hire four full time (40 hours per pay period) personnel to perform HMA testing and other duties as time allows.

2. It appears you want the same person(s) for the entire 5 month period. Is this your intent?

Yes. The intent of the RFP is that the same person(s) will work the entire 5 month period on the schedule they have been assigned.

3. Does the Superior Region foresee hiring more than one consultant to provide the technical support?

Yes. The Superior Region expects to hire a minimum of one consultant and a maximum of four consultants to meet the requirements of this RFP.
